

Accounting online

Accounting online or 'Cloud' computing as it is often referred, is the use of computer hardware & software applications delivered as a service over the internet.

Over the last couple of years the traditional accounting software providers (Reckon and MYOB) have moved their desktop versions into the online world.

We are recommending that all clients review & consider an online accounting solution.

Benefits of online software include:

- Access available anywhere you have an internet connection
- Simplifies adjustments to your file
- Available for PC, Apple MAC, iPad or Android devices which makes it more accessible from more places
- You can have a number of users online at one time working simultaneously
- No need for additional training. If you already have experience with the traditional desktop versions of software, you can use the online version as it has the same layouts and processes
- Simplify the process for you to provide information to us
- Backups are completed constantly in the online data centers
- Advanced security – The same security standards used by banks for internet banking
- No need for upgrades! The software is fully maintained, which means that you are always working with the most current up to date software (including PAYG Withholding tax tables)
- Accountant access – With your approval we can have online access to your data file at any time
- Improved assistance with real time screen access from McMillan's office
